topic title

Talk Selection Screen

Short Description: The login screen is the first screen of the application

▽ ▽ **Metadata**

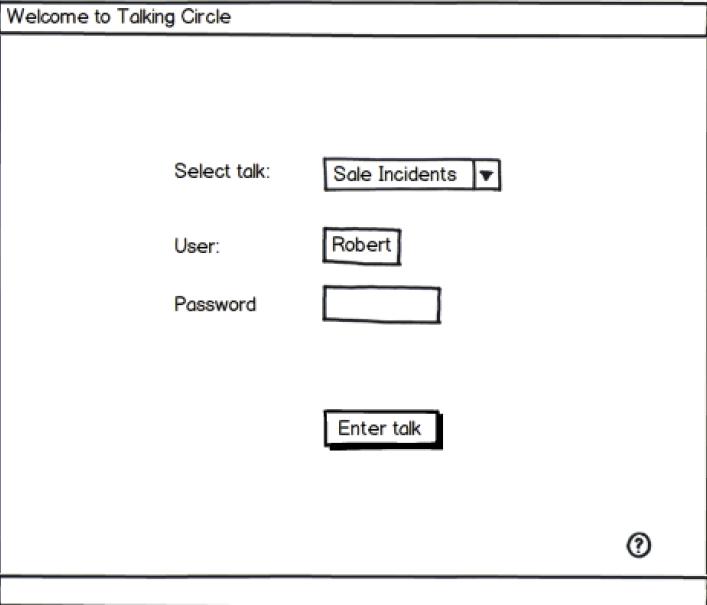

Keywords:
(ui>(talk selection)¶)

Resource Identifier: AppId: AppName: Id: tss20

The screen allows you to:

1. Select the talk you want to enter
2. Specify credentials, if you are logging in for the first time.

Welcome to Talking Circle

In the **Select talk** dropdown, the value "Sale Incidents" is selected. The "User" field contains "Robert". The "Password" field is empty. The "Enter talk" button is at the bottom left. A question mark icon is in the bottom right corner of the main window area.

In the **Select talk** dropdown you can choose an existing, on-going talk, or enter a name to start a new one.

Chapter 1. Installation

This section describes how to install the desktop version of the Talking Circle® messaging application.

Installation on Windows

This task describes how to install the desktop version of the Talking Circle® messaging application on Windows.

Follow the steps to install the software on a Windows 10 platform.

In case you have an older version installed on your system, make sure you uninstall it first. Leave the settings in place, as they are used by the newer version.

1. Download the installation kit [Talking Circle Web Site](#)
2. Extract the archive
3. Run the `talkingcircle.exe` installer
4. Choose **default** when asked for installation options.

Related information

[Installation on Mac \(on page 3\)](#)

Installation on Mac

This task describes how to install the desktop version of the Talking Circle® messaging application.

Follow the steps to install the software on a Mac OS X platform.

In case you have an older version installed on your system, make sure you uninstall it first. Leave the settings in place, as they are used by the newer version.

1. Download the installation kit [Talking Circle Web Site](#)
2. Extract the archive
3. Drag the application icon to your Applications folder

Related information

[Installation on Windows \(on page 3\)](#)

Chapter 2. Application UI

This section describes the Talking Circle® user interface. You can find here the description for each of the UI components.

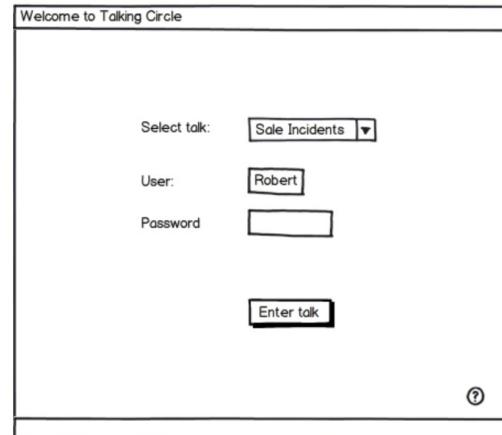

The application is structured in two screens.

Talk Selection Screen

The login screen is the first screen of the application

The screen allows you to:

1. Select the talk you want to enter
2. Specify credentials, if you are logging in for the first time.

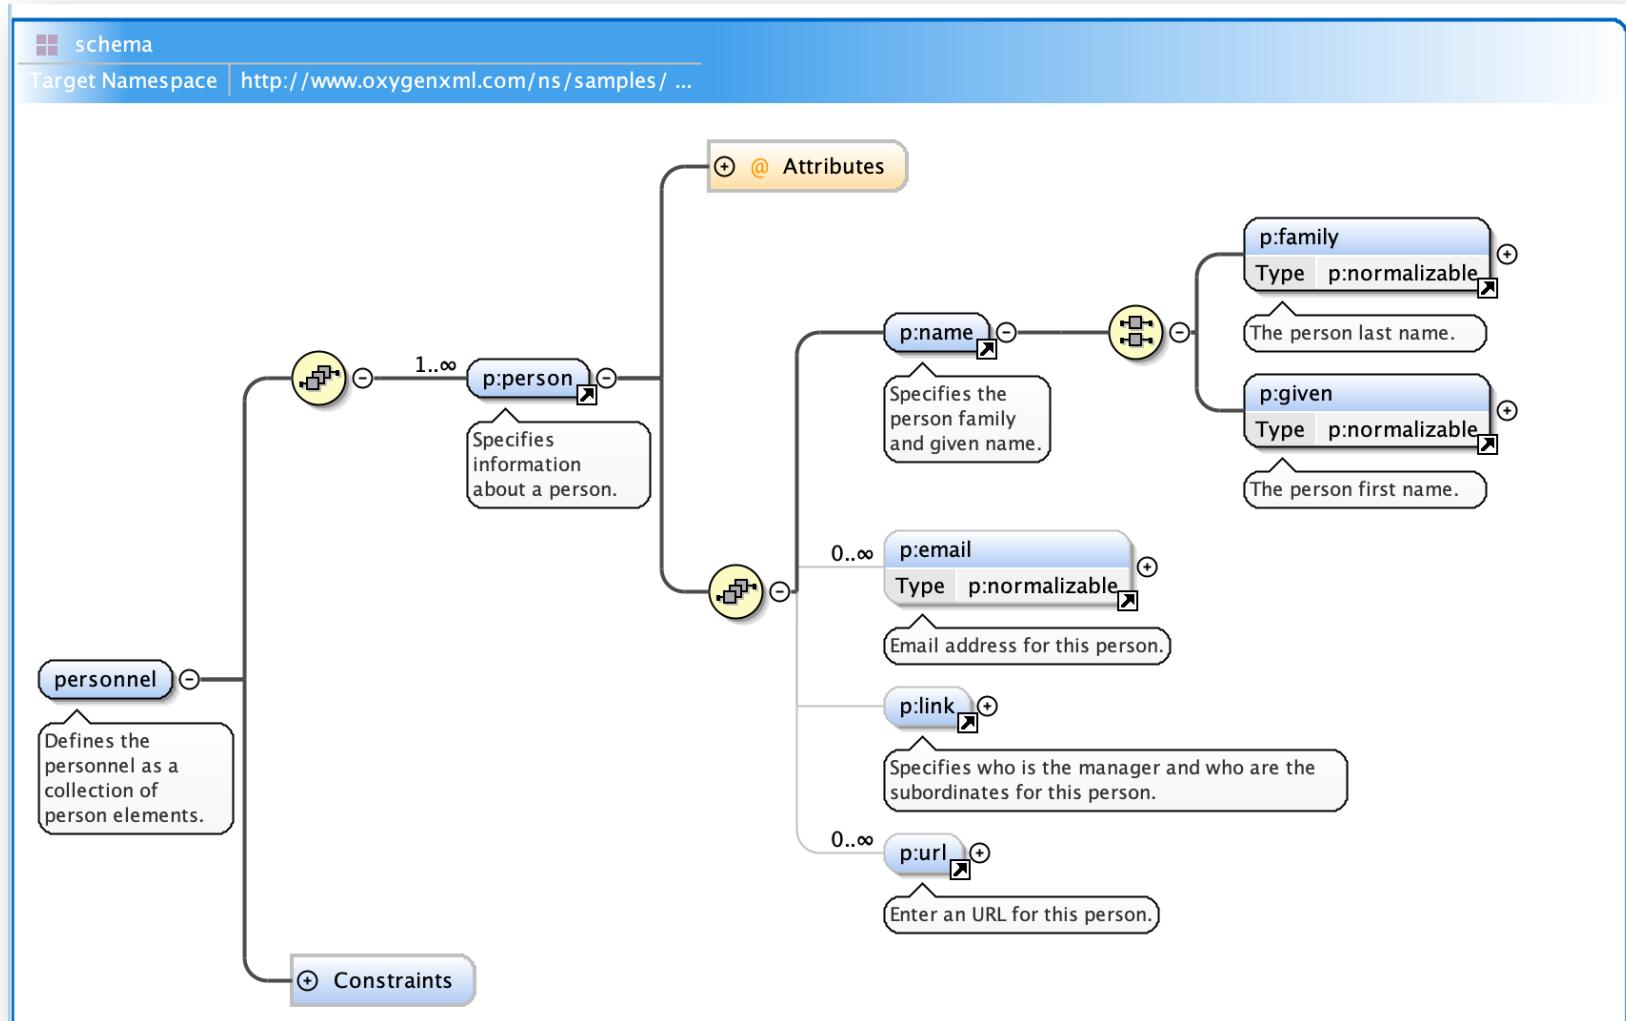

In the **Select talk** combo box you can choose an existing, on-going talk, or enter a name to start a new one.

Assistance with customization of your DITA implementation

XML development functionality is available in Editor and Developer

- Schema/DTD customizations
- CSS editor and inspector
- XSLT editor, debugger, profiler

Styles Basket for Oxygen 25.1

See Results (3) Download (4) Upload (5) Discard changes ?

Galleries & Styles Preview

Welcome to Oxygen Styles Basket!

Here you can create CSS customizations for your DITA PDF and WebHelp transformations.

- 1 Start by defining your brand colors, fonts, and logos, or choose a preset combination from the **Branding** section.
- 2 Choose and mix aspects from the other styles galleries.
- 3 View how the customization looks by using **See results**.
- 4 Use **Download** to save your customization as a publishing template.
- 5 Use **Upload** to initialize the Styles Basket based on your customization.

If you want to further refine certain aspects that are not found in the Styles Basket, you can download your publishing template as a zip file, unzip it, then create another CSS file where you add more styling rules.

Keeping your advanced styling in a separate file ensures that your CSS rules are not lost when you regenerate the CSS from the Styles Basket.

When your CSS stylesheet is finished, you can simply import it in the publishing template descriptor file as a new CSS resource.

Got It!

Space Ships

The **X22000 Super Rocket** is the most powerful space exploration rocket in the world. With the ability to lift nearly 114 metric tons into orbit, it can lift more than twice the payload of the next closest space exploration vehicle, but at one-fifth the cost. The X22000 use proven technology and reliability.

DANGER: The oxygen and hydrogen tanks are highly flammable and can explode. Use the dedicated robot to load the tanks into both cores.

Warning: Main engines combustion chamber can reach 12,000°F (6,648.9°C).

Attention: Cores disassemble must not occur after rocket landing.

Table 2. Rockets Engines Compatibility

Rocket	Engine Name	Thrust (vac.)	Manufacturer(s)	
X22000	Vulcan XL	44360 kN	Vanilla Aircraft Engines	
	J-360X	44385 kN	Aerospace Rocketjet	Wyatt & Houston
	RS-250	44383 kN	Wyatt & Houston	
	RD-1120	44397 kN	Progress Rockets	

CAUTION: Wyatt & Houston wrench is necessary for removing RS engines line.

The maintenance area is divided into several security subzone.

Important: Illegal access will result in prosecution.

External collaboration for review

Collaboration in 3 simple steps

1. Create a review task
2. Share it with collaborators
3. Integrate their changes back into the original content

You need to collaborate but...

your external collaborators

- do not have access to your specific tools
- are not part of your specific workflow
- have no access to the repository

you want/need

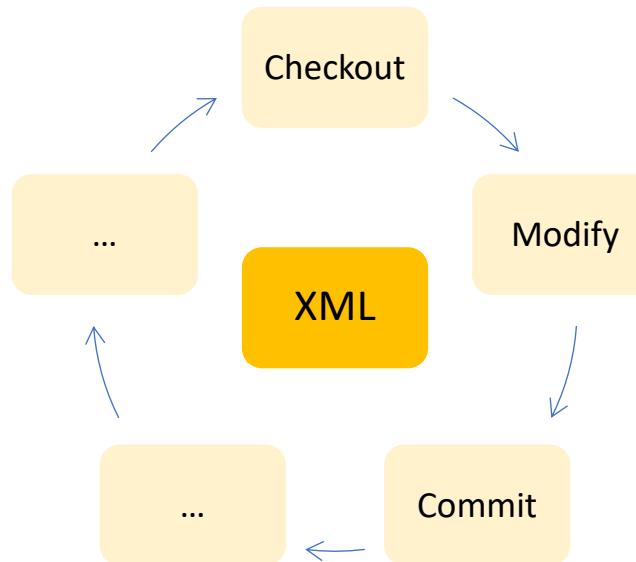

- to approve/review changes before they reach the repository
- a less formal way to receive feedback
- take advantage of collaboration without any setup cost

Existing workflow

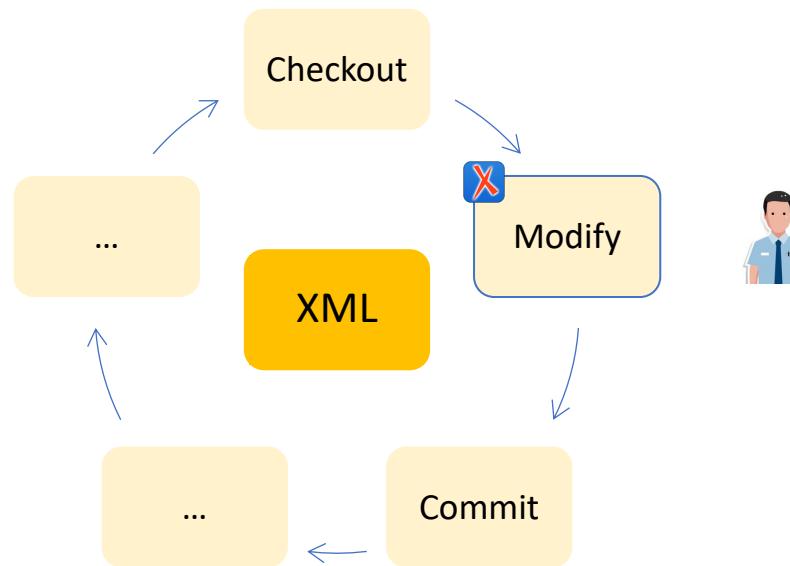

XML

The screenshot shows a web-based application window titled "Oxygen Content Fusion". At the top left is a red square icon containing a white letter "F". To its right is the text "Oxygen Content Fusion". On the far right of the header are three icons: a user profile, the name "George Bina", and a help/question mark icon.

The main content area has two tabs at the top: "DETAILS" (which is active) and "SETTINGS". Below the tabs, the title "Review provided solutions" is displayed. Underneath this title are two buttons: "SHARE" (with a share icon) and "MORE".

A section titled "Files" contains a single item: "Troubleshooting" with a small icon next to it. To the right of this section is a blue "NEW FILE" button. Below the "Files" section is a "ADD MESSAGE" button.

At the bottom of the main content area, a message states: "There are no messages for this task."

Adding and removing plug-ins

You can extend DITA-OT with additional plug-ins to change the default output types in various ways, add entirely new kinds of output formats, or implement DITA specializations. A variety of open source plug-ins are available from the plug-in registry at dita-ot.org/plugins.

- **Installing plug-ins**
Use the `dita install` subcommand to install plug-ins.
- **Removing plug-ins**
Use the `dita uninstall` subcommand to remove a plug-in.
- **Adding plug-ins via the registry**
DITA-OT 3.2 supports a new plug-in registry that makes it easier to discover and install new plug-ins. The registry provides a searchable list of plug-ins at dita-ot.org/plugins.
- **Rebuilding the DITA-OT documentation**
When you add or remove plug-ins, you can rebuild the documentation to update the information on the extension points, messages, and parameters that are available in your environment.

Older: "EXM-51739 SOP for releasing the GIT Client." - AlexJitianu

Accountable	alex_smarandache@sync.ro
Consulted	alex_jitianu@sync.ro
Informed	

1. Make sure the automated tests pass.

2. Check the "What's New" list from addon.xml to make sure we didn't omit anything. A JIRA Search can be used to obtain a list with all the issues resolved since the last release.

3. Execute SOP Procedura de release Addons

4. Create a new branch with the number of the release, eg. 5.0.1

5. Increment version in trunk/pom.xml to make easier to understand we are working on the next version.

6. Update the oxygen-addons-site dependencies section with the new version.

7. Notify all the users that reported the issue resolved on the released version. A JIRA Search can be used to obtain a list with all the issues resolved since the last release.

8. Promote the release on social media, oxygen-users list and DITA list etc.

Results:

O noua versiune a addon-ului este disponibila la <https://www.oxygenxml.com/InstData/Addons/default/updateSite.xml>

Newer: "The name of the add-on descriptor is extension.xml" - AlexJitianu

Manual Validation Actions

You can choose to validate JSON documents at any time by using the manual validation actions that are available in Oxygen XML Editor.

Manual Validation Actions

To manually validate the currently edited document, use one of the following actions:

Validate

Available from the **Validation** drop-down menu on the toolbar, the **Document > Validate** menu, or from the **Validate** submenu when invoking the contextual menu on one or more JSON documents in the **Project view**.

Validate with

Available from the **Validation** drop-down menu on the toolbar or the **Document > Validate** menu. This action opens a dialog box that allows you to **specify a schema for validating the current document**.

Note:
The **Validate with** action does not work for files loaded through a **custom protocol plugin** developed independently and added to Oxygen XML Editor after installation.

Automation of publishing, validation and other tasks

Oxygen Publishing Engine provides automated DITA publishing
Oxygen Scripting allows for many automated processes including:

- DITA Map Validation and Check for Completeness
- Generate documentation for many documents (schemas, stylesheets, etc.)
- Automated diff reports

Oxygen Publishing Engine

Replicate Oxygen XML DITA publishing for automation

Oxygen Scripting

- Validate Files and Projects
- Validate DITA maps or DITA OT Project Files
- Run Transformation Scenarios
- Generate Documentation for XSLT, XML Schema, WSDL
- Batch Convert Between Various File Formats
- Compare Files or Directories to See and Merge Differences
- Run XML Refactoring Operations
- Format and Indent Files
- Generate Sample XML Files
- Compile Framework Customization Scripts
- Build Translation Package for DITA Files
- Flatten XML Schema with Multiple Includes

 Abhishek Tiwary
19 days ago

Hi,

Where is the result file stored after transformation is complete?
I checked it in the temp folder, but no luck.

Regards,
Abhishek Tiwary

Hi Abhishek,

You can control where the transformation results are saved by activating the "Save as" radio button and editing the location in the corresponding text field, in the Output tab of the Edit Scenario dialog box.

Best Regards,
Octavian

 Radu Coravu added a comment on the DITA OT PDF Customization - Table with Alternate Row Background Colors page. 5 days ago  OXB

I also do not know why this does not work for you. You are publishing from the command line, right?
The customization dir should be specified something like:

dita -i ... -o ... --customization.dir=d:\path\to\customizationDir

 Radu Coravu approved a comment on the DITA OT PDF Customization - Table with Alternate Row Background Colors page. 5 days ago  OXB

I don't know why, but --cusimozation.dir doesn't work for me. Dita-ot 3.7.4, org.dita.pdf2 plugin.
customization/fo/attr/custom.xsl:

```
<?xml version='1.0'?>
```

Metadata

Keywords:

(XSLT transformation scenario) (Output tab)

When you [create a new transformation scenario](#) or [edit an existing one](#), a configuration dialog box is displayed that allows you to customize the transformation with various options in several tabs.

The **Output** tab contains the following options:

- Prompt for file**: At the end of the transformation, a file browser dialog box is displayed for specifying the path and name of the file that stores the transformation result.
- Save As**: The path of the file where the result of the transformation is stored. You can specify the path by using the text field, the [Insert Editor Variables](#) button, or the [Browse](#) button.
- Open in Browser/System Application**: If selected, Oxygen XML Editor automatically opens the result of the transformation in a system application associated with the file type of the result (for example, in Windows PDF files are often opened in Acrobat Reader).

Note: To set the web browser that is used for displaying HTML/XHTML
